Traffic Management Systems

- We create innovative traffic management software based on Database Integration Technology.
- Implemented IT solutions allow us to prepare advanced products compatible with other ITS devices and applications, regardless of the manufacturer.
- We deliver traffic, as well as road and weather conditions data acquired from specialized sets of sensors.
- We create and use technologically advanced non-mandatory sensors that allow transmission of data for traffic management systems.

safety and flow

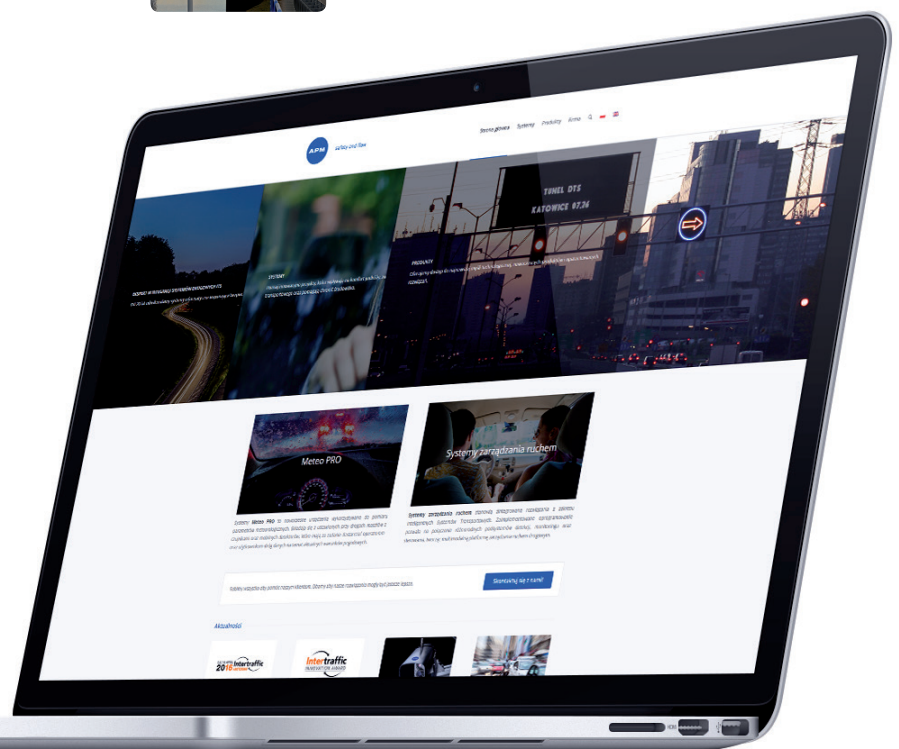

WHAT DISTINGUISHES US?

We have over 20 years of experience in road, city and ITS integration.

R&D division consisting of practitioners and science personnel creates software and hardware solutions fit for individual requirements and needs of our clients.

We perform our tasks comprehensively, starting from design and engineering, through project realization, implementation and commissioning, ending on support and maintenance.

Our installations meet the global standards of reliability for the high availability systems in 3rd or 4th class.
